SUMMARY

Backend-focused Software Engineer building enterprise SaaS features and cross-product APIs with Java, Spring Boot, gRPC, and MongoDB. Experienced in microservice upgrades, database optimization, and full-stack development. Combines design ownership with AI-assisted engineering to deliver reliable, maintainable solutions.

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, Kotlin

Backend: Spring Boot, Spring Security, REST APIs, gRPC, Protocol Buffers, Microservices

Data: MongoDB, MySQL, Spring Data JPA, Hibernate, Flyway, Mongock/Mongobee

Frontend & mobile: Ember.js, React.js, Jetpack Compose, HTML/CSS

Engineering tools: Git, Gradle, Maven, GitHub Actions, Docker, Linux, JUnit, Mockito

AI-assisted development: GitHub Copilot, prompt engineering, agent workflows, RCA, debugging, scenario generation

PROFESSIONAL EXPERIENCE

IDeaS - A SAS Company Pune, India

Software Engineer Oct 2024 - Sep 2026

- Enabled cross-product data exchange through REST and gRPC APIs with pagination, filtering, and audit information; maintained backward-compatible Protocol Buffer contracts validated through contract-style tests.
- Built concurrency controls for long-running jobs using centralized mutation guards and status APIs to prevent conflicting changes; integrated frontend progress tracking and conflict handling.
- Optimized MongoDB access with targeted indexes, bulk reads, and batched audit retrieval to reduce repeated database calls; developed migration logic to transform and upsert legacy records.
- Upgraded a microservice application across **20 Java modules** from Spring Boot 2.6 to Spring Boot 3.5, redesigning security configuration for Spring Security 6, migrating Jakarta APIs, and upgrading five generated API-client modules.
- Delivered Ember.js/TypeScript configuration and reporting features with reusable multiselect components, validation, and conditional rendering; simplified shared logic and eliminated redundant service calls.
- Applied GitHub Copilot and iterative agent workflows across feature development, RCA, scenario design, debugging, and code review to shorten delivery cycles while independently owning architecture and validation.
- Reduced manual operational effort by approximately **60%** through API orchestration guided by live database load; built a browser extension to make development, staging, and production environments visually distinct.

Data Nova India Pvt. Ltd. Noida, India

Application Developer Feb 2023 - May 2023

- Built ERP mobile application modules using MVVM, isolating presentation and application logic so interface changes could be made independently of core functionality.
- Improved API-backed data retrieval by approximately **30%** by refining retrieval logic and eliminating unnecessary processing in ERP workflows.
- Reduced reported application issues by approximately **20%** through targeted defect resolution; refined interface behavior to improve usability.

PROJECTS

UNITY - Peer-to-Peer Music Sync GitHub

Kotlin, Jetpack Compose, Media3 ExoPlayer, Coroutines, TCP/UDP | Functional prototype

- Designed the architecture and protocol for a local-network Android music session with leader/follower control, device discovery, pairing-code joining, and synchronized queues.
- Used iterative AI-assisted development to implement TCP commands, UDP playback synchronization, local media discovery, and MediaSession controls; reviewed and refined generated code against the intended design.

Store REST API GitHub

In progress | Spring Boot, Spring Data JPA, MySQL, Flyway, OpenAPI

- Built cart-management REST APIs with layered architecture and DTO mapping; added request validation and exception handling for consistent error responses, Flyway migrations for versioned schema changes, and OpenAPI documentation.

EDUCATION

PG Diploma in Advanced Computing (PG-DAC) Mar 2024 - Aug 2024

Centre for Development of Advanced Computing, Pune

B.Tech in Computer Science & Engineering 2020 - 2023

Dr. A.P.J. Abdul Kalam Technical University
