SUMMARY

Full Stack Software Engineer with 2+ years of experience building SaaS features and cross-product APIs with **Java, Spring Boot, Ember.js, and MongoDB**. Experienced in microservice upgrades, database optimization, and end-to-end delivery. Combines design ownership with AI-assisted engineering to deliver reliable, maintainable solutions.

TECHNICAL SKILLS

Languages: Java 17, JavaScript, Python
Frameworks & Libraries: Spring Boot, Spring Security, Hibernate/JPA
Architecture & Design: Microservices, REST APIs, gRPC, Distributed Systems
Databases: MongoDB, MySQL, Flyway
Frontend: Ember.js, React.js, HTML/CSS
Cloud & DevOps: Docker, GitHub Actions, CI/CD, Linux, Git, Gradle, Maven, SonarQube
Testing & Quality: JUnit, Mockito, QUnit | *Currently exploring: Kubernetes, Kafka, Redis*

PROFESSIONAL EXPERIENCE

IDeaS - A SAS Company Pune, India
Software Engineer Mar 2026 - Sep 2026

- Led the Spring Boot 2.6 to 3.5 migration across **20 Java modules** - Jakarta transition, Spring Security 6 rework, five regenerated API clients - modernizing the build to Gradle 8.14.5 with aligned CI pipelines and environment-based credentials, keeping the **353-test suite green** across **12 dedicated test PRs**.
- Cut manual operational effort by approximately **60%** via API orchestration driven by live database load; built a browser extension that visually distinguishes development, staging, and production.
- Used GitHub Copilot and iterative agent workflows across feature development, RCA, scenario design, debugging, and code review to shorten delivery cycles while retaining **full ownership** of architecture and validation.

Sr. Associate Software Developer Oct 2024 - Mar 2026

- Built **REST and gRPC APIs** for cross-product data exchange across **5 products**, with pagination, filtering, and audit information; maintained backward-compatible Protocol Buffer contracts verified through **contract-style tests**.
- Added concurrency controls for long-running jobs - mutation guards and status APIs preventing conflicting changes, wired to frontend progress tracking - and tuned **MongoDB** access with indexes, bulk reads, and batched audit retrieval, **cutting repeated database calls**, plus data-migration and upsert logic.
- Shipped Ember.js/TypeScript configuration and reporting features end-to-end, including a **23-file feature build** and reusable multiselect component; consolidated shared logic across **18 files** and removed redundant service calls.
- Fixed recurring production defects (time zones, date calculations, case normalization, null handling) with **focused regression tests**.

Data Nova India Pvt. Ltd. Noida, India
Application Developer Feb 2023 - May 2023

- Built ERP mobile application modules with **MVVM**, isolating presentation from application logic; improved API-backed data retrieval by approximately **30%** and reduced reported issues by **20%** via streamlined logic and targeted defect fixes.

PERSONAL PROJECTS

ORCHARD - The Living Market GitHub | Live Site
React, TypeScript, Vite, Tailwind CSS, React Router, React Hook Form, Zod *Oct 2026 - Oct 2026*

- Built a grocery storefront consuming the live Store REST API with no mock fallback; implemented **Stripe checkout**, optimistic cart updates, and in-memory token handling with silent refresh.

Store REST API GitHub | Live API
Shipped | Spring Boot, Spring Data JPA, MySQL, Flyway, JWT, Stripe, OpenAPI *Sep 2026 - Oct 2026*

- Built cart-management **REST APIs** with layered architecture and DTO mapping; added request validation and exception handling for consistent error responses, Flyway migrations for versioned schema changes, and OpenAPI (Swagger UI) documentation.
- Deployed with **JWT authentication** and Stripe checkout.

UNITY - Peer-to-Peer Music Sync GitHub
Kotlin, Jetpack Compose, Media3 ExoPlayer, Coroutines, TCP/UDP | Functional prototype *Aug 2026 - Aug 2026*

- Designed the **architecture and protocol** for a local-network Android music session with leader/follower control, device discovery, pairing-code joining, and synchronized queues.
- Used iterative **AI-assisted development** to implement TCP commands, UDP playback synchronization, local media discovery, and MediaSession controls; reviewed and refined generated code against the intended design.

EDUCATION

PG Diploma in Advanced Computing (PG-DAC) Mar 2024 - Aug 2024
Centre for Development of Advanced Computing, Pune

B.Tech in Computer Science & Engineering 2020 - 2023
Dr. A.P.J. Abdul Kalam Technical University
